disasters can be very high for both the people directly affected and the country. What can people do to prepare for an unexpected event?

You've probably been reading news about floods, hurricanes, fires, and other natural disasters. By mid-November 2016, the American Red Cross had responded to 15 major natural disasters-five more than in all of 2015.

Matthew, which did great damage in Florida, Georgia, Virginia, and the Carolinas. The Federal Emergency Management Agency manages the Disaster Relief Fund. After Matthew hit, the agency paid more than $\$ 120$ million to individuals and families as well as an additional several million to repair buildings, roads, and other structures.

Natural disasters can be hard to avoid. But there are things everyone can do to prepare and
help others who are affected (see "What You Can Do," on page 4).

Explore Insurance Options Here's how insurance works: You buy a policy from an insurance company that promises to pay you a sum of money if something-your home, car, health, or life-is lost or damaged. You hope never to need it, but you pay for the insurance anyway because the cost of replacing that home, car, or income (in the case of life insurance) would be difficult, if
"Flooding is the number one natural disaster," explains Lynne McChristian, director of natural-disaster response for the Insurance Information Institute. Families generally protect themselves against natural disasters with homeowner's insurance, she says. The typical homeowner's policy protects against fire, hurricane, hail, lightning, and some other disasters. But it often doesn't protect against floods and earthquakes. If you
live in an earthquake-prone
area or near a coast with a higher flood risk, you may need special insurance.

## Help Out at Home

 Protect your belongings by creating a record of everything in your home, especially the expensive things, so you know what you have in case it gets damaged.Go with your parents through every room in your home. Write down every item and take pictures or videos.

For expensive items and
electronics, note the serial numbers, makes, and models. If your parents still have receipts from any items, include them. Go to knowyourstuff.org for a free tool from the Insurance Information Institute. It will walk you through how to gather information and store it in the cloud. That way you'll be able to access it if your computer is damaged. Another way you can help? Make it your job to test the smoke alarms in your house once or twice a year to protect against fire.

## What You Can Do

Charities ask for money after every natural disaster. Unfortunately, so do con artists looking to take advantage of your generosity. Make sure to give wisely:

- Research a charity at give.org or charitynavigator.org. - Give money, not stuff. It's tempting to send clothes, toys, and other things you aren't using to people who need them. But it's hard to get the right supplies to the right people, so it's better to send money. Have a garage sale to sell your old things, then donate the proceeds.
- Know texting takes time. Some organizations ask for donations by text message. It's a convenient way to give, but it can take three months for the money to arrive.

## ASK JEAN

## Jean Chatzky is a money expert.

At what age can kids get a summer job?
-Ananda, 9, Atlanta, Georgia
That depends on your definition of job. You need to be at least 14 to get paid by an actual business, including a store or a restaurant. And until you're 16 , you can work only up to three hours per school day and eight hours per weekend day. But there are many things you can do to earn money if you're younger than 14 , including dog walking, car washing, babysitting, and yard work. Or you could tutor younger children on their schoolwork or older people on how to use technology. Think about what you're good at and whether there's a way to make money from that skill.

## By the Numbers

It can be tricky to calculate the total cost of natural disasters, since funds come from many different sources. This data, from CoreLogic, estimates how much was spent after eight relatively recent events.

## 2013 Oklahoma Tornadoes

Several strong tornadoes strike the Midwest.

$$
\$ 4.3 \text { billion }
$$

2012 Superstorm Sandy
